1. Introduction

The Integrated Portal is a web-based system that manages the thesis process for MS(Research) and PhD students. It provides a single platform for thesis submission, review, and approval. The portal is used by students, supervisors, academic committees, and academic office staff. Each user has a defined role and access level. It automates the currently manual processes and improves clarity, efficiency, and tracking. This document describes the software requirements of the system and serves as a reference for its design, development, and use.

1.1 Purpose

The purpose of this document is to define the software requirements for the Integrated Portal for Academic Office. It describes the system's intended functionality, user roles, and operating constraints in a formal manner.

This document is intended to serve as a reference for developers, students, academic authorities, and reviewers involved in the design, implementation, and evaluation of the system. It helps the parties involved understand the system's purpose and what is included in its scope.

1.2 Scope

The software product to be developed is the Integrated Portal for Academic Office, a web-based academic workflow management system.

The portal is designed to manage the complete thesis process for PhD and MS(Research) students, starting from synopsis submission and ending with thesis evaluation including viva-voce and approval. It supports online submission of forms and documents, multi-level review and approval, examiner management, status tracking, and generation of official certificates. The system provides role-based access to students, supervisors, academic committees, and administrative authorities to ensure that each user can perform only the actions permitted for their role.

The system will allow students to submit their synopsis and thesis, apply for thesis submission, track the status of their submissions, receive notifications, view reviewer comments, and download certificates after approval. Supervisors will be able to initiate and manage student requests, upload required reports, propose examiner lists, and respond to comments or rejections. Academic committees and authorities such as PSPC, DPGC, HoD, Section Officers, Dean and Associate Dean of Academic Affairs, and Senate Chairperson will review submissions, provide recommendations, verify details, and grant approvals as per defined workflows.

The AR Academic will use a dedicated dashboard to manage examiner consent, thesis evaluation, and related communications. The examiners will use a separate dashboard for thesis evaluation by filling the necessary forms.

The portal aims to reduce manual paperwork and ensure timely processing of thesis-related activities by providing a centralized, auditable, and structured digital workflow. The system does not replace academic decision-making; it only facilitates the submission, review, communication, and record-keeping processes associated with thesis evaluation.

1.3 Definitions, Acronyms, and Abbreviations

Term / Acronym	Definition
PTS	PhD Thesis Submission. A set of structured forms used for managing different stages of a PhD thesis process.
PTS-1	Submission and review process for the synopsis of a PhD thesis.
PTS-2	Thesis submission and approval process for a PhD thesis.
PTS-3	Examiner list proposal and approval process for a PhD thesis.
PTS-4	Form for evaluation of PhD thesis by Examiners.
MSRTS	MS Research Thesis Submission form used for managing thesis submission and evaluation for MS(Research) students.
MSRTS-1	Submission and review process for the synopsis of a MS(Research) thesis.
MSRTS-2	Thesis submission and approval process for a MS(Research) thesis.
MSRTS-3	Examiner list proposal and approval process for a MS(Research) thesis.
MSRTS-4	Form for evaluation of MS(Research) thesis by Examiners.
PSPC	Postgraduate Student Progress Committee. A committee responsible for reviewing and recommending student academic progress.
DPGC	Department/Discipline Postgraduate Committee. A departmental body that reviews and recommends postgraduate academic matters.
HoD	Head of Department. The academic head of a department responsible for reviews and approvals within the department.
ADoAA	Associate Dean of Academic Affairs. An academic authority responsible for recommendations and approvals.
DoAA	Dean of Academic Affairs. An academic authority responsible for final academic approvals.
AR Academic	Assistant Registrar (Academic). An administrative role responsible for managing examiner communication and thesis evaluation workflows.

1.5 Overview

This document is organized to describe the requirements of the Integrated Portal for Academic Office in a structured manner. It provides both high-level context and detailed system requirements. Section 2 presents a general description of the system, including its purpose, main functions, users, constraints, and assumptions. Section 3 defines the specific functional and non-functional requirements that guide system development and testing.

2. General Description

This section presents a high-level description of the Integrated Portal for Academic Office. It explains how the system fits into the existing academic environment, outlines its main functions, identifies its users, and states the general constraints and assumptions. This section is intended to provide context only and does not define detailed system requirements.

2.1 Product Perspective

The Integrated Portal for the Academic Office is a web-based system that supports existing academic rules and approval processes. It does not change institutional policies or decision-making, but helps manage thesis-related submissions, reviews, and record keeping. The system works with the current academic setup and uses existing login systems and official email for communication. It automates processes that are currently handled through paper forms, emails, or separate tools.

2.2 Product Functions

At a high level, the system provides the following functions:

- Online submission of thesis-related forms and documents
- Role-based authentication, review, recommendation, and approval workflows
- Parallel and sequential approvals as defined by academic processes
- Status tracking and notifications for all involved users
- Examiner list management and communication support
- Generation and storage of official academic records and certificates
- Online thesis evaluation management

Detailed functional requirements are described in later sections of this document.

2.3 User Characteristics

The Integrated Portal for Academic Office is meant for multiple academic and administrative roles with different responsibilities and access levels. The user roles and their general responsibilities within the system are summarized in the table below. Detailed system behavior and permissions for each role are specified later in the functional requirements section.

User Role	Description	Primary Responsibilities
PhD Student	Doctoral student responsible for submitting and tracking thesis-related work	Submit synopsis and thesis, apply for thesis submission, track status of submission and evaluation, view remarks, download certificates
MS Research Student	MS(Research) student responsible for submitting and tracking thesis-related work	Submit synopsis and thesis, apply for thesis submission, track status of submission and evaluation, view remarks, download certificates
Main Supervisor	Primary faculty supervisor responsible for initiating and managing student submissions	Initiate synopsis and examiner forms, upload reports, respond to reviews, track thesis progress
Co-Supervisor	Supporting faculty supervisor associated with a student	Review submissions, provide recommendations, view examiner details
PSPC Member	Member of the Postgraduate Student Progress Committee	Review synopsis submissions, provide recommendations or reversion with comments
DPGC Member	Member of the Department/Discipline Postgraduate Committee	Review submissions, recommend approval or reversion with comments
Head of Department (HoD)	Academic head of the department	Review submissions, recommend approval or reversion with comments
Section Officer	Administrative staff responsible for verification	Verify documents and details, forward submissions
Associate Dean of Academic Affairs (ADoAA)	Senior academic authority	Final review, approval or reversion, modify examiner ordering where applicable
Dean of Academic Affairs (DoAA)	Senior academic authority	Recommendation, approval or reversion with comments
Senate Chairperson (Director)	Chair of the Senate and highest approving authority	Approve or revert examiner lists, finalize examiner ordering
AR Academic	Assistant Registrar handling academic administration	Final review, approval or reversion, manage examiner communication, consent, evaluation process, and dashboard
Office Member	Academic office staff supporting administrative processes	Assist in handling records and submissions
Examiner	Authority responsible for evaluating the thesis	Fill evaluation forms through a dashboard after reviewing the thesis

2.4 General Constraints

The system must follow the academic rules, approval hierarchies, and workflows defined by the institution. These processes limit how submissions, reviews, and approvals can be designed and sequenced within the system.

The portal is required to be web-based and accessible through standard web browsers. It must support role-based access control and maintain records of all actions for audit purposes. Data storage, document handling, and user access must comply with institutional policies on security and data privacy.

The system design is also constrained by the need to support multiple user roles, parallel reviews, and confidential information handling, such as restricted visibility of examiner ordering.

2.5 Assumptions and Dependencies

The system is developed with the assumption that users have access to a modern web browser. It is also assumed that users will have valid institutional credentials to access the portal.

The system depends on existing academic rules, approval structures, and workflows defined by the institution.

The system may rely on external services such as institutional authentication systems, email services, and data storage infrastructure. Changes or unavailability of these services can affect system functionality and may require updates to this specification.

3. Specific Requirements

This section describes the detailed requirements of the Integrated Portal for Academic Office. These requirements define what the system must do and how it should behave.

Each requirement in this section is written to be clear, testable, and uniquely identified. The requirements are organized into categories so they are easy to understand and reference.

This section focuses on system behavior and constraints and avoids describing design or implementation details.

3.1 External Interface Requirements

This section describes how the system interacts with users, hardware, software, and communication services. It defines the external interfaces required for system operation.

3.1.1 User Interfaces

The system shall provide a web-based user interface accessible through standard web browsers.

The interface shall be role-based, showing only the functions and information relevant to the logged-in user. Forms, status indicators, and notifications shall be presented in a clear and consistent manner to support ease of use.

3.1.2 Hardware Interfaces

The system does not require any specialized hardware interfaces. It shall operate on standard client devices such as desktop computers, laptops, and mobile devices with internet access.

3.1.3 Software Interfaces

The system may interface with existing institutional systems such as authentication services and email services. It shall also use a database system for storing user data, documents, and workflow records.

3.1.4 Communications Interfaces

The system shall use standard internet communication protocols to support web access and electronic notifications. Communication with users and external services shall occur over secure network connections.

3.2 Functional Requirements

This section describes the functional requirements of the Integrated Portal for Academic Office. Each requirement defines a specific feature of the system and explains how the system responds to user actions.

3.2.1 Synopsis Submission and Review – PTS-1

3.2.1.1 Introduction

PTS-1 supports the submission and review of a student's thesis synopsis after the open seminar. The system enables supervisors, academic committees, and academic authorities to review, recommend, revert, or approve the synopsis through a defined workflow.

3.2.1.2 Inputs

- PTS-1 form details entered by the main supervisor
- Synopsis report uploaded as a document
- Review decisions (recommend or revert) from reviewers
- Comments provided during review or reversion

3.2.1.3 Processing

- The main supervisor initiates the PTS-1 request by submitting the completed form with the synopsis report.
- All co-supervisors receive the request in parallel and may either recommend or revert the submission.
- If any co-supervisor reverts the request, the system marks the PTS-1 status as *Reverted* and returns it to the main supervisor.
- After all supervisors recommend, the request is forwarded to PSPC members for review.
- PSPC members review the request and may recommend or revert it.
- The request is then reviewed sequentially by DPGC and the Head of Department.
- The Section Officer verifies the submitted details and forwards the request without the option to revert.
- The Dean of Academic Affairs reviews the request and makes the final decision to approve, reject, or revert.
- On approval, the system marks the PTS-1 status as *Accepted*.

3.2.1.4 Outputs

- Updated PTS-1 status (In Progress, Reverted, Accepted, or Rejected)

- Notifications sent to all relevant users on submission, reversion, and approval
- Stored review comments and timestamps
- Maintained record of all submission attempts

3.2.1.5 Error Handling

- If required fields or documents are missing, the system shall prevent submission and display an error message.
- If a reviewer attempts an unauthorized action, the system shall deny the action.
- If a reversion occurs, the system shall require a comment before processing the action.

3.2.2 Examiner List Submission and Approval – PTS-3

3.2.2.1 Introduction

PTS-3 supports the submission, review, and approval of the examiner list for thesis evaluation. The system enables controlled review, ordering, and approval of examiners while enforcing confidentiality rules based on user roles.

3.2.2.2 Inputs

- Examiner details submitted by the main supervisor
- Consent status for each proposed examiner
- Review decisions (recommend, revert, approve)
- Comments provided during review or reversion
- Examiner ordering changes by authorized roles

3.2.2.3 Processing

- The main supervisor initiates PTS-3 by submitting a proposed list of examiners and indicating whether prior consent has been obtained for each examiner.
- Co-supervisors are granted view-only access to the examiner list and cannot modify or revert it.
- The Head of Department reviews the list and may recommend or revert it with comments.
- The Section Officer verifies examiner details and forwards the request with optional comments.
- The Dean of Academic Affairs reviews the list and may reorder examiners, recommend, or revert the submission.
- The Senate Chairperson reviews the examiner list and may reorder, revert, or approve it.
- Any ordering changes made by the Dean of Academic Affairs or the Senate Chairperson are recorded by the system and made visible only to them.
- After approval, the finalized examiner list is made available to the AR Academic for further processing.

3.2.2.4 Outputs

- Updated PTS-3 status (In Progress, Reverted, or Approved)
- Finalized examiner list for academic processing
- Stored examiner ordering history
- Notifications sent to relevant users on submission, reversion, or approval

3.2.2.5 Error Handling

- The system shall prevent submission if required examiner details are missing.
- Reversion actions shall require a mandatory comment.
- Unauthorized users shall be prevented from modifying examiner ordering.
- The system shall enforce confidentiality rules on examiner ordering visibility.

Figure 1: PTS-1 and PTS-3 flows

3.2.3 Thesis Submission and Approval – PTS-2

3.2.3.1 Introduction

PTS-2 supports the submission and approval of a student's thesis. The system enables supervisors, academic authorities, and administrative staff to review the submission and take approval or reversion actions through a defined workflow.

3.2.3.2 Inputs

- PTS-2 form details submitted by the student
- Thesis document uploaded by the student
- Review decisions (approve or revert) from reviewers
- Comments provided during reversion

3.2.3.3 Processing

- The student completes the PTS-2 form and uploads the thesis document through the system.
- The system records the thesis submission date.
- All assigned supervisors receive the submission in parallel and may either approve or revert it with a comment.
- If any supervisor reverts the submission, the system returns it to the student for re-submission.
- After supervisor approvals, the submission is reviewed by the Departmental Postgraduate Committee and the Head of Department.
- The AR Academic performs the final review and may accept or revert the submission.
- Upon acceptance, the system generates a thesis submission certificate.

3.2.3.4 Outputs

- Updated PTS-2 status (In Progress, Reverted, or Accepted)
- Generated thesis submission certificate in PDF format
- Download access to the certificate for the student
- Status visibility for all involved users

3.2.3.5 Error Handling

- The system shall prevent submission if required fields or the thesis document are missing.
- Reversion actions shall require a mandatory comment.
- Unauthorized users shall be prevented from approving or reverting the submission.

Figure 2: PTS-2 flow

3.2.4 AR Academic Dashboard for PhD Theses

3.2.4.1 Introduction

The AR Academic Dashboard provides administrative tools to manage examiner communication, consent tracking, and thesis evaluation processes after approval of the examiner list. It supports monitoring and control of examiner-related actions for each student.

3.2.4.2 Inputs

- Student academic details
- Approved synopsis and thesis documents
- Finalized examiner list with ordering
- Examiner consent status
- Examiner responses and evaluation status

3.2.4.3 Processing

- The system displays student details, synopsis, and thesis information to the AR Academic.
- The system displays the finalized examiner list, separated into Indian and Foreign examiners, along with consent status.
- The AR Academic may send the synopsis to a selected examiner to request consent when consent has not been received.
- Upon receiving consent, the AR Academic may send both the synopsis and thesis to the examiner for evaluation.
- The AR Academic may send reminders to examiners who have not responded.
- If an examiner rejects the request or does not respond within a defined period, the AR Academic may withdraw the request and proceed to the next examiner in the approved order.
- Examiner evaluation submissions received through the system are reflected in the dashboard for tracking and status updates.

3.2.4.4 Outputs

- Updated examiner consent and evaluation status
- Notifications sent to examiners and academic staff
- Updated dashboard view reflecting current evaluation progress

3.2.4.5 Error Handling

- The system shall prevent sending documents to an examiner if required approvals or consent conditions are not met.
- The system shall prevent unauthorized actions by non-administrative users.
- The system shall notify the AR Academic in case of failed communication attempts.

3.2.5 Examiner Evaluation Submission – PTS-4

3.2.5.1 Introduction

PTS-4 supports the submission of thesis evaluation details by appointed examiners. The system provides a simple interface for examiners to submit their evaluation in response to an official evaluation request.

3.2.5.2 Inputs

- Examiner login credentials or secure access link
- Evaluation form details filled by the examiner
- Evaluation decision and remarks
- Optional supporting document upload, if applicable

3.2.5.3 Processing

- The system provides the examiner with access to the PTS-4 evaluation form after the thesis has been sent for evaluation.
- The examiner fills in the required evaluation details and submits the form through the system.
- Upon submission, the system records the evaluation details along with the timestamp.

- The submitted evaluation is stored and reflected in the AR Academic Dashboard for tracking and further academic processing.

3.2.5.4 Outputs

- Stored examiner evaluation record
- Updated evaluation status visible to authorized academic users
- Confirmation of successful submission to the examiner

3.2.5.5 Error Handling

- The system shall prevent submission if mandatory evaluation fields are incomplete.
- Unauthorized users shall be prevented from accessing or submitting the evaluation form.

3.2.6 Synopsis Submission and Review – MSRTS-1

3.2.6.1 Introduction

MSRTS-1 supports the submission and review of a student's thesis synopsis after the open seminar. The system enables supervisors, academic committees, and academic authorities to review, recommend, revert, or approve the synopsis through a defined workflow.

3.2.6.2 Inputs

- MSRTS-1 form details entered by the main supervisor
- Synopsis report uploaded as a document
- Review decisions (recommend or revert) from reviewers
- Comments provided during review or reversion

3.2.6.3 Processing

- The main supervisor initiates the MSRTS-1 request by submitting the completed form with the synopsis report.
- All co-supervisors receive the request in parallel and may either recommend or revert the submission.
- If any co-supervisor reverts the request, the system marks the MSRTS-1 status as *Reverted* and returns it to the main supervisor.
- The request is then reviewed sequentially by DPGC and the Head of Department or any Nominated individual.
- The Section Officer verifies the submitted details and forwards the request without the option to revert.
- The Dean of Academic Affairs reviews the request and makes the final decision to approve, reject, or revert.
- On approval, the system marks the MSRTS-1 status as *Accepted*.

3.2.6.4 Outputs

- Updated MSRTS-1 status (In Progress, Reverted, Accepted, or Rejected)
- Notifications sent to all relevant users on submission, reversion, and approval
- Stored review comments and timestamps
- Maintained record of all submission attempts

3.2.6.5 Error Handling

- If required fields or documents are missing, the system shall prevent submission and display an error message.
- If a reviewer attempts an unauthorized action, the system shall deny the action.
- If a reversion occurs, the system shall require a comment before processing the action.

3.2.7 Examiner List Submission and Approval – MSRTS-3

3.2.7.1 Introduction

MSRTS-3 supports the submission, review, and approval of the examiner list for thesis evaluation. The system enables controlled review, ordering, and approval of examiners while enforcing confidentiality rules based on user roles.

3.2.7.2 Inputs

- Examiner details submitted by the main supervisor
- Consent status for each proposed examiner
- Review decisions (recommend, revert, approve)
- Comments provided during review or reversion
- Examiner ordering changes by authorized roles

3.2.7.3 Processing

- The main supervisor initiates MSRTS-3 by submitting a proposed list of examiners and indicating whether prior consent has been obtained for each examiner.
- Co-supervisors are granted view-only access to the examiner list and cannot modify or revert it.
- The Head of Department reviews the list and may recommend or revert it with comments.
- The Section Officer verifies examiner details and forwards the request with optional comments.
- The Dean of Academic Affairs reviews the list and may reorder examiners, recommend, or revert the submission.
- The Senate Chairperson reviews the examiner list and may reorder, revert, or approve it.
- Any ordering changes made by the Dean of Academic Affairs or the Senate Chairperson are recorded by the system and made visible only to them.
- After approval, the finalized examiner list is made available to the AR Academic for further processing.

3.2.7.4 Outputs

- Updated MSRTS-3 status (In Progress, Reverted, or Approved)
- Finalized examiner list for academic processing
- Stored examiner ordering history
- Notifications sent to relevant users on submission, reversion, or approval

3.2.7.5 Error Handling

- The system shall prevent submission if required examiner details are missing.
- Reversion actions shall require a mandatory comment.

- Unauthorized users shall be prevented from modifying examiner ordering.
- The system shall enforce confidentiality rules on examiner ordering visibility.

Figure 3: MSRTS-1 and MSRTS-3 flows

3.2.8 Thesis Submission and Approval – MSRTS-2

3.2.8.1 Introduction

MSRTS-2 supports the submission and approval of a student's thesis. The system enables supervisors, academic authorities, and administrative staff to review the submission and take approval or reversion actions through a defined workflow.

3.2.8.2 Inputs

- MSRTS-2 form details submitted by the student
- Thesis document uploaded by the student
- Review decisions (approve or revert) from reviewers
- Comments provided during reversion

3.2.8.3 Processing

- The student completes the MSRTS-2 form and uploads the thesis document through the system.
- The system records the thesis submission date.
- All assigned supervisors receive the submission in parallel and may either approve or revert it with a comment.
- If any supervisor reverts the submission, the system returns it to the student for re-submission.
- After supervisor approvals, the submission is reviewed by the Departmental Postgraduate Committee and the Head of Department.
- The AR Academic performs the final review and may accept or revert the submission.
- Upon acceptance, the system generates a thesis submission certificate.

3.2.8.4 Outputs

- Updated MSRTS-2 status (In Progress, Reverted, or Accepted)
- Generated thesis submission certificate in PDF format
- Download access to the certificate for the student
- Status visibility for all involved users

3.2.8.5 Error Handling

- The system shall prevent submission if required fields or the thesis document are missing.
- Reversion actions shall require a mandatory comment.
- Unauthorized users shall be prevented from approving or reverting the submission.

Figure 4: MSRTS-2 flow

3.2.9 AR Academic Dashboard for MS(Research) Theses

3.2.9.1 Introduction

The AR Academic Dashboard provides administrative tools to manage examiner communication, consent tracking, and thesis evaluation processes after approval of the examiner list. It supports monitoring and control of examiner-related actions for each student.

3.2.9.2 Inputs

- Student academic details
- Approved synopsis and thesis documents
- Finalized examiner list with ordering
- Examiner consent status
- Examiner responses and evaluation status

3.2.9.3 Processing

- The system displays student details, synopsis, and thesis information to the AR Academic along with the final examiner list.
- The AR Academic may send the synopsis to a selected examiner to request consent when consent has not been received.
- Upon receiving consent, the AR Academic may send both the synopsis and thesis to the examiner for evaluation.
- The AR Academic may send reminders to examiners who have not responded.
- If an examiner rejects the request or does not respond within a defined period, the AR Academic may withdraw the request and proceed to the next examiner in the approved order.
- Examiner evaluation submissions received through the system are reflected in the dashboard for tracking and status updates.

3.2.9.4 Outputs

- Updated examiner consent and evaluation status
- Notifications sent to examiners and academic staff
- Updated dashboard view reflecting current evaluation progress

3.2.9.5 Error Handling

- The system shall prevent sending documents to an examiner if required approvals or consent conditions are not met.
- The system shall prevent unauthorized actions by non-administrative users.
- The system shall notify the AR Academic in case of failed communication attempts.

3.2.10 Examiner Evaluation Submission – MSRTS-4

3.2.10.1 Introduction

MSRTS-4 supports the submission of thesis evaluation details by appointed examiners. The system provides a simple interface for examiners to submit their evaluation in response to an official evaluation request.

3.2.10.2 Inputs

- Examiner login credentials or secure access link
- Evaluation form details filled by the examiner
- Evaluation decision and remarks
- Optional supporting document upload, if applicable

3.2.10.3 Processing

- The system provides the examiner with access to the MSRTS-4 evaluation form after the thesis has been sent for evaluation.
- The examiner fills in the required evaluation details and submits the form through the system.
- Upon submission, the system records the evaluation details along with the timestamp.
- The submitted evaluation is stored and reflected in the AR Academic Dashboard for tracking and further academic processing.

3.2.10.4 Outputs

- Stored examiner evaluation record
- Updated evaluation status visible to authorized academic users
- Confirmation of successful submission to the examiner

3.2.10.5 Error Handling

- The system shall prevent submission if mandatory evaluation fields are incomplete.
- Unauthorized users shall be prevented from accessing or submitting the evaluation form.

3.3 Classes / Objects

This subsection identifies the major logical objects used by the system. These objects represent key academic entities and workflows handled by the portal. The descriptions are conceptual and do not imply specific implementation details.

3.3.1 User

3.3.1.1 Attributes

- User ID
- Name
- Role (Student, Supervisor, Committee Member, Administrative Staff)
- Department
- Contact Information

3.3.1.2 Functions

- Authenticate and access the system
- View tasks and submissions relevant to the assigned role
- Perform role-specific actions such as submit, review, recommend, or approve

3.3.2 Thesis Submission

3.3.2.1 Attributes

- Submission ID
- Student Details
- Submission Type (PTS, MSRTS)
- Current Status
- Submission Date
- Associated Documents

3.3.2.2 Functions

- Accept submission data and uploaded documents
- Track approval and review status
- Store comments and revision history
- Support resubmission after reversion

3.3.3 Examiner

3.3.3.1 Attributes

- Examiner Name
- Affiliation
- Category (Indian / Foreign)
- Contact Information
- Consent Status

3.3.3.2 Functions

- Be associated with a thesis submission
- Track consent and evaluation status
- Support ordering and selection during evaluation

3.4 Non-Functional Requirements

This section defines the quality attributes that the system must satisfy at the overall system level.

3.4.1 Performance

- The system shall respond to user actions such as form submission, approval, and status updates within a few seconds under normal operating conditions.
- The system shall support multiple concurrent users without significant performance degradation

3.4.2 Reliability

- The system shall operate without failure for extended periods during normal use.
- In case of a failure, no submitted data shall be lost.

3.4.3 Availability

- The system shall be available 24 hours a day, 7 days a week, except during scheduled maintenance.

3.4.4 Security

- The system shall require user authentication using unique login credentials.
- Access to system functions shall be restricted based on user roles.
- Basic protection shall be provided to prevent unauthorized access to user data.

3.4.5 Maintainability

- The system shall be structured in a way that allows future updates and bug fixes without impacting existing core functionality.
- Changes to the system shall be possible without requiring major rework of unrelated components.

3.4.6 Portability

- The system shall be accessible through standard web browsers across common operating systems.
- The system shall be designed to allow upgrades without loss of existing user data or disruption of core workflows.

3.5 Inverse Requirements

The system shall not make academic decisions or judgments. All approvals, rejections, and recommendations are made by authorized users, and the system only records and routes these actions. The system shall not allow users to access functions or data outside their assigned roles. It shall also not modify or delete academic records without proper authorization.

3.6 Design Constraints

The design of the system is constrained by the need to support predefined academic workflows, multiple user roles, and controlled information visibility. These constraints affect how system features can be structured and presented. No additional hardware-specific or technology-specific design constraints are imposed beyond those already stated in this document.

3.7 Logical Database Requirements

The system requires persistent storage to maintain records related to users, submissions, approvals, comments, and system activities. The stored data must support tracking of submission states and historical actions across the academic workflow.

The database must logically support structured academic records, document references, and time-based information such as submission and approval dates. Data retention and modification shall follow institutional practices, and records shall remain available for review and reference as required.

3.8 Other Requirements

The system shall provide basic search and filtering capabilities to help users locate records efficiently. The system shall be designed to allow future enhancements without major changes to existing functionality.
